OGS: 12th – 15th Oct. 2003

EIGC was present at one of the most prestigious Oil and Gas event where more than 400 national and international companies exhibited their products and services.

EIGC exhibited its complete product line along with the services it can offer to its customers while highlighting the following key areas:

1. Complete line of gas control and welding equipment.
2. Turnkey projects for air separation plants.
3. Our cryogenic capabilities

The response to our exhibition stand was quite encouraging while getting positive nod from our visitors.

Two New storage tanks been added to the two existing in Abu Dhabi

Meeting the ever growing demand.....

In view of the growing market demand and always keeping ourselves ahead of time, we have undertaken to increase the storage capacity of all our branches.

The stationary storage capacity of all our branches have been almost doubled while our moving capacity has been increased with the addition of new cryogenic tankers, cementing our supremacy even on road.

Safety tip of the month:

Keep cylinders cool and away from heat sources, flammable or corrosive material and Oil.

Never Use Oil or Grease on a cylinder valve. If the valve is tight, return the cylinder to the supplier and obtain a replacement. Do not use excessive force to open the valve

Ranjith Nair, Commercial Manager

Innovative Solutions for Customers: Tri Gas Onsite Gas Mixer successfully introduced into UAE market.

In our on going commitment to provide cost effective and safe solutions to all the end users of gases, we have successfully installed and commissioned a trigas onsite gas mixer for Argon, Carbon Dioxide and Oxygen for one of the most reputed truck body manufacturers in the UAE. This has resulted in drastic savings for the customer, in terms of gas costs, handling costs and residual gas wastages. The commissioning of the centralized gas supply system along with the gas mixing unit has virtually phased out the usage of conventional high-pressure premixed gas cylinders from the shop floor of the end user and has in turn made the work place a much safer place.
