We do not predict the future, we invent it.

Erik Chacra
Editor

“A leader is one who knows the way, goes the way and shows the way.”

Famous quote comes to reality in EIGC, falling in line with our market behaviour. As a leader we lead and others follow.

EIGC in Iran

EIGC was present at the 9th International Oil, Gas, Petrochemical Exhibition in Iran (July 2004), one of the most prestigious and largest attended specialized event in the Middle East.

EIGC exhibited its complete range of products to the Iranian visitors, who returned a comforting response. The success of the exhibition strengthened the ties between EIGC and its existing clientele, as well as expanded the potential customer base in the region.

Neotech – the new family member

EIGC has catered its customer base with industrial and medical gases as well as equipment for 25 years. To enhance the service and product offering to the growing demands of Health & Home Care segment in the region, EIGC has recently launched the company, *Neotech Medical Equipment*.

Jyothi Kothaneth was assigned as Sales Manager for the new company. Neotech is not only distributing products which already exist in the local market, but specialises in new innovative products and solutions never seen in the region.

More than just a facelift

After being covered for some time, a new impressive facade of our head office building on Ittihad road revealed itself to the public eye one early morning in July. To follow is a series of similar facelifts at EIGC’s other branches.

Safety tip of the month:

Keep cylinders secured at all times. Gases are often invisible and tasteless; leaks can go undetected.

If the flame produces too much heat for the work to be welded, DO NOT decrease the pressures or close the valves. Use a smaller tip.
